

Put your presentation or lecture on the internet in no time at all!

PRESENTATIONS

Innovating Rich Media technology by Learning Valley allows you to record knowledge and information easily. Ready for exchange!

Presentations 2Go is used throughout the world for high quality rich media webcasting solutions. A video image of the speaker is linked automatically to the presentation, broadcast live and saved online for re-use.

Powered by
Microsoft Silverlight

Proof of practice

The tried and true solutions offered by Presentations 2Go are applied successfully in practice in the educational sector as well as in the business world. This technique, which combines video, sound and digital presentation materials, makes it possible to record knowledge and information in a sustainable and cost-efficient way and to transfer it asynchronously.

Dependable, scalable, simple and flexible

The Presentations 2Go system has been subjected to thorough testing in which stability and dependability were the most important criteria. The modular layout of the system makes it possible to start simply and to expand the system into a full-fledged online video streaming facility with advanced options. As it makes use of a Windows media framework, the system is scalable, stable and manageable.

Platform independent thanks to the unique Silverlight Viewer

The recordings can be viewed online or locally on a random platform and browser with the integrated Rich Media viewer based on Microsoft Silverlight technology. The possibility to navigate quickly and easily through the presentation, set favourite markers and adjust the settings for size and location of the video and presentation windows make this a valuable asset.

No Stress...

Connect your Apple, Linux or Windows presentation PC and start your presentation. Adjustments and special features on the presentation PC are not necessary!

A broad range of applications

The possibilities are numerous: from collaboration between different institutions in the organisation of educational programmes, distance lectures, providing a solid foundation for competency training in digital portfolio, video tests and exams, recording video lectures by experts, weblectures, training sessions, press meetings, product presentations, conferences, events or meetings.

There is a Presentations 2Go variation to suit every purpose

- **Presentations 2Go Pro** for capturing presentations with professional equipment. From mobile to completely automated room deployment.
- **Presentations 2Go Lite** for simple recording with a webcam. Easy to save on your hard disc, a CD or a USB stick.
- **Presentations 2Go Lite+** for recording with a webcam. Can be saved on a video server and is available as a site license with the unique option of integration with Learning Valley's Reflect digital portfolio.
- **Presentations 2Go Video Server** to apply streaming video and online rich media webcasting within your organisation or institution.
- **Presentations 2Go Live** provides online services that will allow you to apply streaming video and weblectures in your organisation, quickly and problem-free.
- **Presentations 2Go Road Kit** is comprised of a portable set integrated into a sturdy flight case with all the necessary hardware for recording, including a camera, a wireless microphone and a mixing console.
- **Professional Services**, services for professional advice, implementation and application of our Rich Media solutions as well as custom training.
